In order to assess the prevalence of sleep disorders in a general hospital population, a study was carried out in a general hospital population aged over 18 years using both clinical evaluation (past history) and a polysomnography. There were 3330 patients included (67% women, 33% men), with a mean age of 54 years (range 18-99). The main clinical symptoms complained of by patients were insomnia (69%) and/or hypersomnia (43%), followed by parasomnias (32%) and movement disorders (27%). The diagnosis of insomnia was made in 62% of patients. There was an increase in the age-related prevalence of hypersomnia with increasing age. After age 60 years, it was observed in 23% of patients. In contrast, parasomnias were uncommon in 82157476af
